DSI-32

# ***What is Fake News?***

- **Fake news** is false or misleading information presented as news.

# Problem Statement

- Fake news is a global epidemic posing threat to our society.
- Social media is fuelling the spread of fake news.
- Fake news are Increasingly challenging to detect.

## Kidnap scare reported at two international schools

Parents concerned after two girls from schools in Dover were approached by strangers in vans

Two cases of strangers approaching young female students of international schools in the Dover area within a week have got parents worrying whether they were kidnap attempts.

In the more recent incident, two days ago, a teenage girl was walking to Tanglin Trust School at Portdown Road from one north MRT station when two people in a white van tried to entice her to get in.

When she ignored them, the woman driver and her companion got out of the van and continued coaxing her.

**Donald J. Trump**  
@realDonaldTrump

Heartwarming to see all of the tremendous support out there, especially the organic Rallies that are springing up all over the Country, including a big one on Saturday in D.C. I may even try to stop by and say hello. This Election was Rigged, from Dominion all the way up & down!

This claim about election fraud is disputed

## 4 in 5 Singaporeans confident in spotting fake news but 90 per cent wrong when put to the test: Survey

Source: The Straits Times (<https://www.straitstimes.com/singapore/4-in-5-singaporeans-confident-in-spotting-fake-news-but-90-per-cent-wrong-when-put-to-the>)

BEIJING (Reuters) - The failure of Catalonia's effort to declare independence shows that Taiwan independence is also doomed to fail as national unity is paramount for all countries, a Chinese official said on Wednesday. China takes a dim view of independence or secessionist movements around the world, while saying...

A

...it adheres to a policy of non-interference in other nations' internal affairs. Beijing has said it opposes any actions to split Spain. Last month Madrid assumed direct rule over Catalonia after the Spanish prime minister sacked the region's secessionist government which had declared independence from Spain following an attempted referendum.

B

... Taiwan is too small and fragile to become a rival to Asia. "Taiwanese are facing a terrible, sad situation. Many Taiwan students and teachers are going into the streets every day to protest, demanding independence. Some even take to the streets, just to demand independence," said a Hong Kong-based official. Hong Kong's main newspaper said on a front page of its online edition last week that it would publish pictures of student and teacher protests on August 9.

# *Demonstration*

## Fake News Classifier

Use this application to differentiate REAL and FAKE news.

Enter the text of the news

Read news

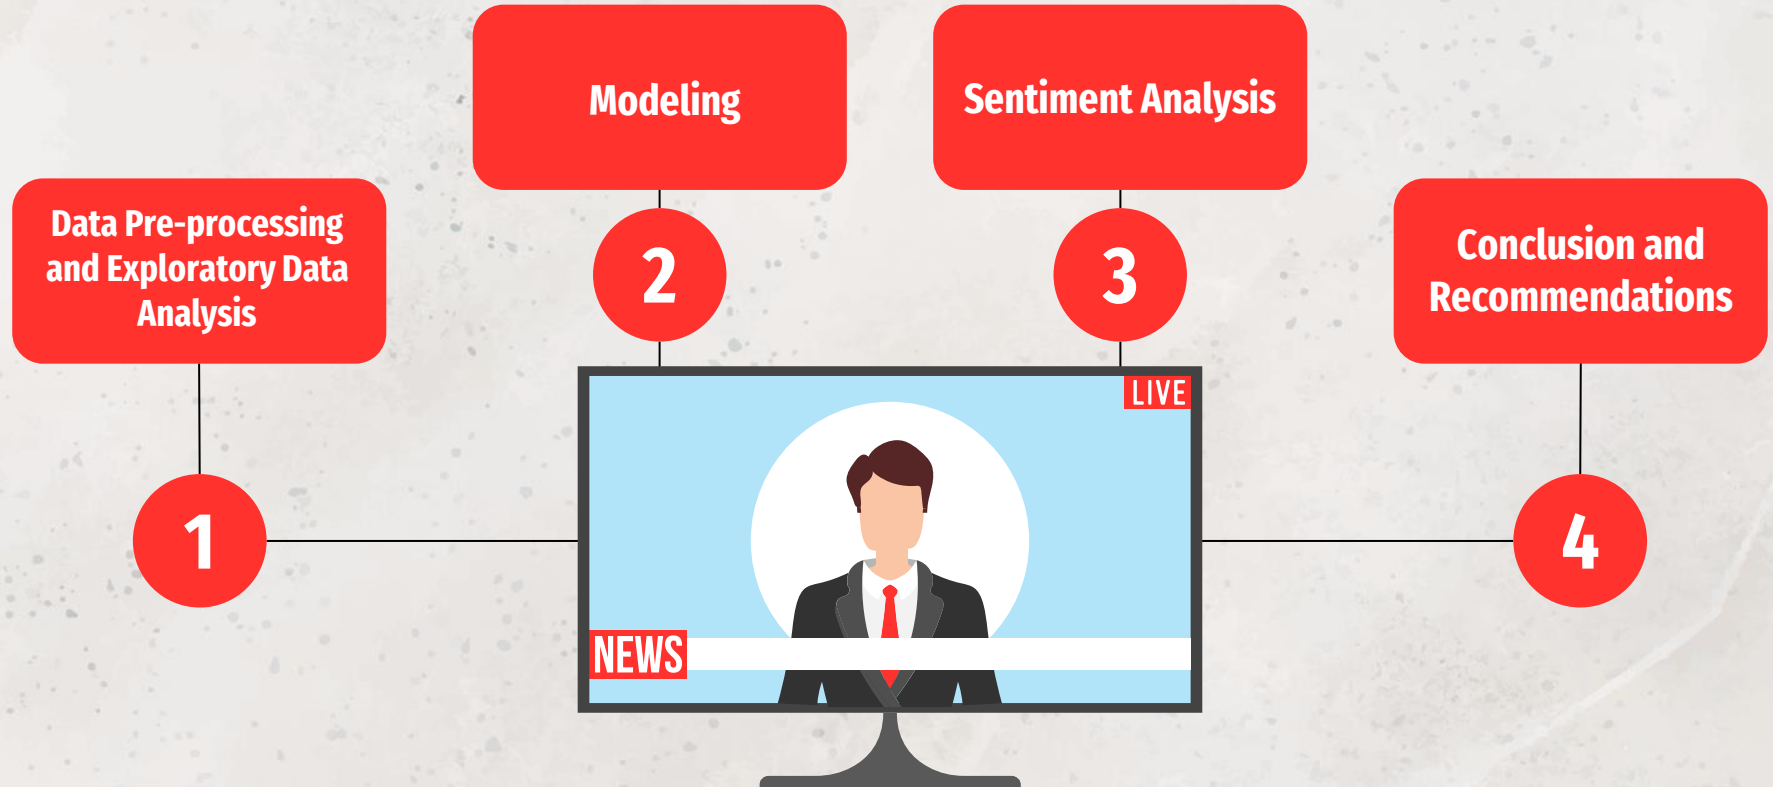

```
{  
  "article" : ""  
}
```

Finished Reading

### Verdict:

This is a FAKE news

# ***AGENDA***

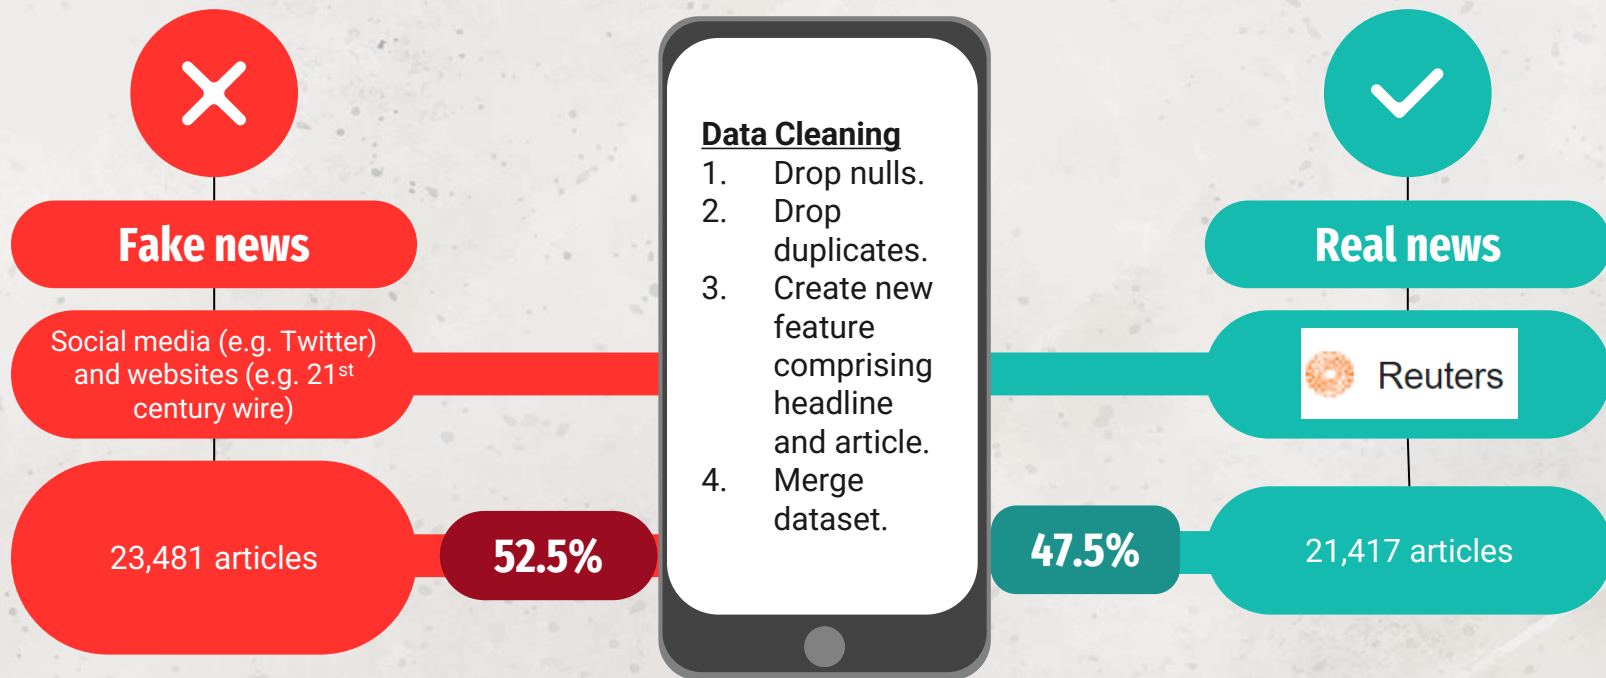

01

# *Data Collection / Cleaning and EDA*

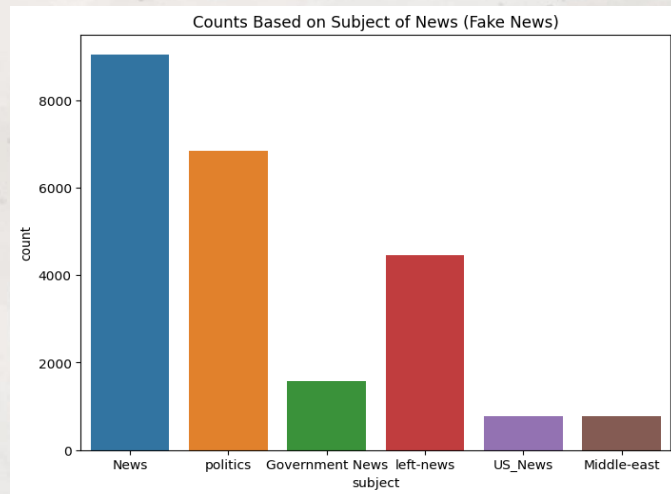

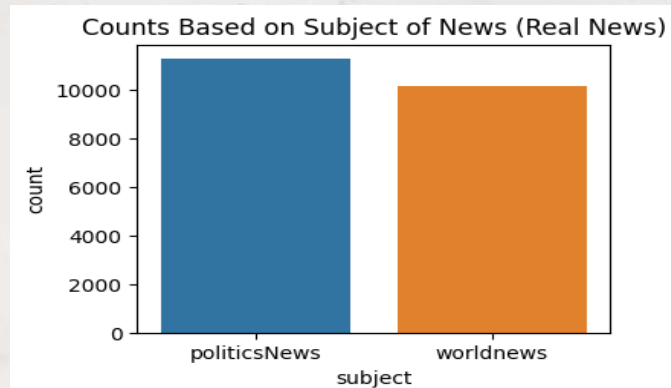

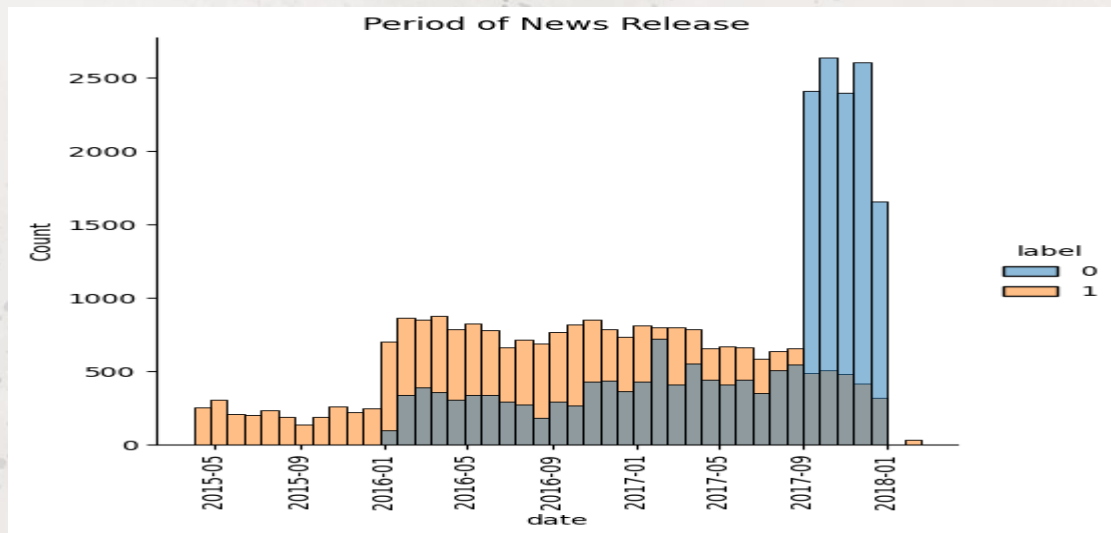

# About the Dataset

# EDA

- Similar subjects reported, dominated by political news.
- Similar period of publication.

# EDA

- Word count (mean) is similar with ~400 words per article.
- Large number of outliers in fake news text.

Distribution of Wordcount (Total)

Boxplot of Wordcount (Total)

# Modeling

Validation on  
Unseen Dataset

Model(s)

Model	Accuracy
Light Gradient Boosting Machine Model	0.8460 (Best Model)
Logistic Regression	0.8150
LSTM (with GloVe Embedding)	0.5700

03

# *Sentiment Analysis*

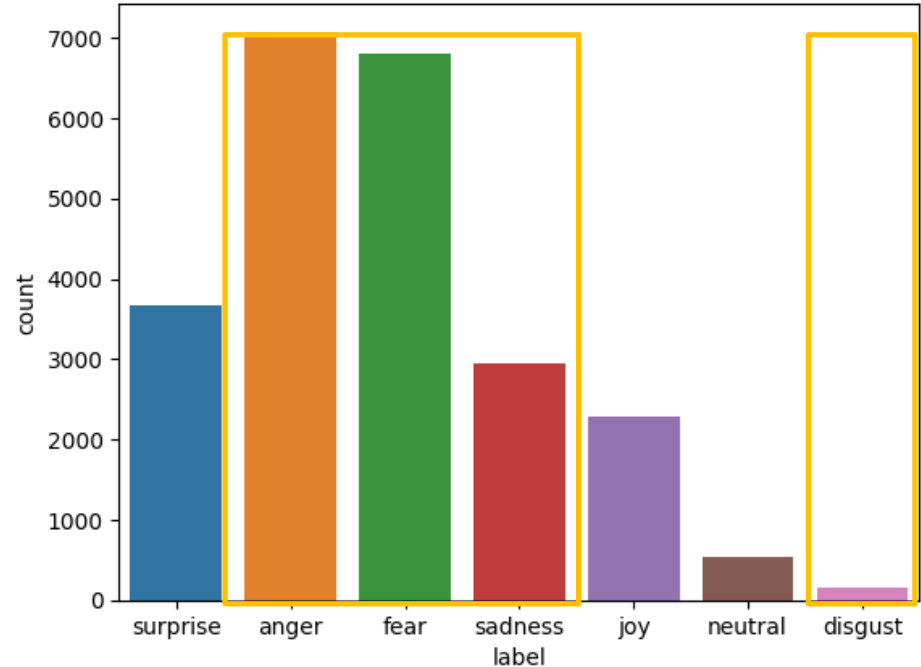

# Sentiment Analysis

- Applied emotion sentiment analysis to understand the emotions behind the fake news.
- Pre-trained **emotion-english-distil roberta-base** (hugging face) model. classifies text into 7 emotions 'surprise', 'anger', 'fear', 'sadness', 'joy', 'neutral' and 'disgust'..
- ~16,000 fake news portrays negative emotions..
- Key words from fake news with negative sentiments (e.g. 'police officers', 'law enforcement', 'black lives matters', 'affordable care act').

**Hugging Face**

Distribution of Emotions for Fake News

04

## *Conclusion and Recommendations*

# ***Key Takeaways***

- **Light Gradient Boosting Machine (LGBM) model** with Count Vectorizer is the best model with an accuracy score of 0.9903 (train) and 0.9935 (test).
- Traditional ML approaches which adopts bag of n-grams performed well on unseen data generated by GPT-2 transformer.
- LSTM neural network model with GloVe word embedding performed well with train and test accuracy (0.99) but was unable to perform on unseen dataset. This is likely due to inadequate sequence and context learned from the training data.

# *Challenges*

- Hardware constraint.
- Difficulty in sourcing and label fake news dataset.
- Requires constant fine-tuning.
- Too many context for model to learn. Large dataset is required.

# ***Future Works (Recommendations)***

- Training and modelling with a larger datasets with varying contexts, focusing on social media news post and Artificial Intelligence (AI) generated fake news.
- Explore multi-classification problem, predicting the varying levels of truth in the fake news article.

## **AI Can Write Disinformation Now—and Dupe Human Readers**

Georgetown researchers used text generator GPT-3 to write misleading tweets about climate change and foreign affairs. People found the posts persuasive.

Breitbart News reported GPT-3 was hired at various social media events, but was killed at another event. [BullfinchDaily](#) [Facebook](#) [Google](#) [Twitter](#)
